

CATERPILLAR® MACHINE DIAGNOSTICS

INDUSTRIAL INSPECTION & SYSTEM CONFIGURATION AUDIT

Machine ID:	CAT-WLD-950	Date of Inspection:	2026-07-28
Machine Name:	CAT Wheel Loader	Lead Engineer:	John Administrator
Manufacturer:	Caterpillar Inc.	Model / Category:	950-GC / CAT Wheel Loader
Diagnostic Status:	Healthy (Score: 100%)	Engine Version:	v2.4-deterministic

Factory Reference Blueprint Specifications

Below is the OEM baseline factory reference configuration for this equipment model.

Specification Parameter	Factory Reference Blueprint
Firmware Version Profile	v2.8.5
PLC Logic Controller Version	v1.88
CPU Architecture	ARM Cortex-A72
RAM System Memory	2GB LPDDR4
Secondary Storage	16GB eMMC
OEM Sensor Nodes Count	8 active nodes
Communication Ports	COM1, Ethernet
Installed Modules	Analog Input, Digital IO

Real-Time Telemetry & Historical Audit

Side-by-side analysis of real-time telemetry metrics against design baseline standards and historical values from previous logs.

Telemetry Parameter	Design Baseline	Real-Time Value	Previous Value	Status
Operating Hours	--	1210.0 hrs	1186.0 hrs	INFO
Engine Temperature	< 85 °C	44.8 °C	44.8 °C	NOMINAL
Battery Voltage	>= 23.5 V	24.0 V	24.0 V	NOMINAL

Oil Pressure	>= 35 PSI	40.0 PSI	40.0 PSI	NOMINAL
Hydraulic Pressure	>= 2200 PSI	3000.0 PSI	3000.0 PSI	NOMINAL
Error Codes	No active codes	None	None	NOMINAL

AI-Powered Diagnostics Analysis

Machine Safety & Health Assessment

SYSTEM OPERATIONAL (Health: 100% - HEALTHY): All real-time telemetry parameters and hardware blueprint configurations match manufacturer specifications.

Root Cause Analysis

No configuration or telemetry deviations detected. Real-time sensor readings (Engine Temperature, Battery Voltage, Oil Pressure, Hydraulic Pressure) are within nominal thresholds.

Suggested Maintenance Worksteps

Perform routine scheduled maintenance according to Caterpillar Operation & Maintenance Manual (OMM).

Crucial Safety Notes

Standard shop safety protocols apply (PPE, standard lockout/tagout during routine service).

Verification & Troubleshooting Steps

Review telemetry logs weekly. Perform scheduled S·O·S fluid sampling.
